Review By StillCold

For nodeWay

3 comments

- you have too many comments, some of it is unnecessary
- forgot to delete some parts of code that was commented
- a lot of comments in 1 place, none in another

4 Style

- good whitespace and var. names
- question: why is main method weirdly indented?
- good indentation

3 Robustness

- it compiles w/ the driver we have but there's no toString() so it prints the address and not what is in the deque.
- why do you keep typecasting to string?
- Remove() needs to throw an exception, not null if deque is empty - from API

4 Readme

- It is accurate!

- Your plan is also very detailed
- Readme is easy to follow
